Shikarpur, Pakistan | +92 312 8592254 | shahvezmemon3@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Kaggle](#)

PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in Machine Learning and applied data science, with hands-on experience building end-to-end ML pipelines — from data cleaning and feature engineering through model training, evaluation, and deployment. Proficient in Python, Scikit-learn, XGBoost, and Pandas/NumPy, with additional experience shipping full-stack applications using Java, Streamlit, and relational databases. Comfortable owning a project from a raw dataset to a working interface a non-technical user can operate.

EXPERIENCE

AI/ML Intern — FlyRank AI

2026 – Present

- Working within an applied search-intelligence track, using real anonymized production search data to analyze page-level ranking and discoverability signals.
- Building a feature-engineering and modeling pipeline — baseline heuristic scoring, feature construction, and iterative model training (logistic regression, decision tree, random forest) — evaluated with client-holdout validation and precision-based ranking metrics.
- Producing explainable, decision-support outputs (ranked review queues, evaluation charts, summary reports) rather than black-box predictions, following the team's data-safety and reporting standards.

EDUCATION

B.S. Computer Science — Sukkur IBA University

Aug 2023 – May 2027 (Expected)

CGPA: 3.30 / 4.00 • Relevant Coursework: Machine Learning, Data Analytics, Database Systems, Statistics, Python Programming

PROJECTS

Calories Burnt Prediction System

[GitHub ↗](#)

Python • XGBoost • Scikit-learn • Pandas • NumPy • Streamlit

- Built an end-to-end regression pipeline on a Kaggle dataset — cleaning data, engineering features, and tuning an XGBoost model — to predict caloric expenditure.
- Applied cross-validation and hyperparameter tuning with Scikit-learn, and visualized feature importance with Matplotlib to interpret model behavior.
- Deployed a real-time Streamlit web app that lets non-technical users get instant calorie predictions from physiological inputs.

Oscar Award Predictor

[GitHub ↗](#)

Python • Scikit-learn • Pandas • NumPy • Matplotlib

- Merged historical Oscar awards and film metadata datasets and performed exploratory data analysis to surface statistically significant patterns in winning films.
- Engineered predictive features from genre, ratings, and release metadata; evaluated multiple Scikit-learn classifiers using accuracy, precision-recall, and ROC-AUC.
- Documented the full pipeline — EDA through model evaluation — in a Jupyter Notebook with Matplotlib/Seaborn visualizations.

Tour & Travel Management System

[GitHub ↗](#)

Java • Java Swing • JDBC • MySQL

- Designed and built a layered desktop application (Swing GUI → business logic → JDBC → MySQL) to manage tour packages, hotel bookings, and customer records, including full account lifecycle features (secure login, password recovery, profile management).
- Centralized database access through a dedicated JDBC connection layer, coordinating booking, payment, and destination modules through a shared dashboard.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

Machine Learning: Scikit-learn, XGBoost, Regression, Classification, Model Evaluation, Feature Engineering

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Data Cleaning, Exploratory Data Analysis

Software Development: Java Swing, JDBC, REST APIs, Streamlit, OOP

Databases: MySQL, MongoDB, SQLite

Tools: Git, GitHub, Jupyter Notebook, VS Code, NetBeans IDE, Linux

CERTIFICATIONS

Kaggle: Python • Intro to Programming • Intro to Machine Learning • Intermediate Machine Learning • Intro to Deep Learning • AI Ethics

ACHIEVEMENTS

- ProBattle Hackathon (IBA Karachi) — Collaborated with a cross-functional team to architect and prototype solutions to real-world engineering challenges under strict time constraints.
- Recipient of the STHP Scholarship at Sukkur IBA University in recognition of strong academic performance.
